## SERVICE MANUAL

# SUNN 1200S

(This is the model name for warranty claims)

AUGUST 1998

### IMPORTANT NOTICE:

The information contained herein is CONFIDENTIAL and PROPRIETARY to Fender Musical Instruments Corp. It is disclosed solely for use by qualified technicians for purposes of equipment maintenance and service. It is not to be disclosed to others without the expressed permission of Fender Musical Instruments Co. All specifications subject to change without notice.

For warranty repair service, only Fender specified part numbers are to be used. It is recommended they also be used for post-warranty maintenance and repair.

Parts marked with an asterisk (\*) indicate the required use of that specific part. This is necessary for RELIABILITY and SAFETY requirements. **DO NOT USE A SUBSTITUTE!**

A coded naming convention is used in the description of certain parts. The codes and what they mean are as follows:

CAPACITOR CODES		HARDWARE CODES	
CAP AE	= Aluminum Electrolytic	BLX	= Black Oxide
CAP CA	= Ceramic Axial	CR	= Chrome Plated
CAP CD	= Ceramic Disk	HWH	= Hex Washer Head
CAP MPF	= Metalized Polyester Film	M	= Machine Screw
CAP MY	= Mylar	NI	= Nickel Plated
CAP PFF	= Polyester Film/Foil	OHP	= Oval Head Phillips
<b>RESISTOR CODES</b>		PB	= Particle Board
RES CC	= Carbon Comp	PHP	= Pan Head Phillips
RES CF	= Carbon Film	PHPS	= Pan Head Phillips Sems
RES FP	= Flame Proof	SMA	= Sheet Metal "A" Point
RES MF	= Metal Film	SMB	= Sheet Metal "B" Point
RES WW	= Wire Wound	SS	= Stainless Steel
		TF	= Thread Forming
		ZI	= Zinc Plated

# SPECIFICATIONS

Product Release No.:	PR 348 <i>(This is not a model number)</i>		
Part Number:	120V Version : 21-3300		
	240V Aust : 21-3330		
	230V UK : 21-3340		
	230V : 21-3360		
	100V : 21-3370		
Preamp section			
Input impedance:	470k Ω		
Full power sensitivity:	12.75mV		
Tone controls:	Treble: +/- 15dB @ 3kHz		
	Bass: +/- 15dB @ 40Hz		
Graphic Equalizer:	+/- 12dB @ 31.5Hz, 63Hz, 125Hz, 250Hz, 500Hz, 1kHz, 2kHz, 4kHz, 8kHz, 16kHz		
Mid notch:	-20dB @ 700Hz		
Low boost:	+10dB @ 40Hz		
High boost:	+10dB @ 6kHz		
Power Amplifier Section			
Power output:	1200 Watts RMS into 2 Ω @ <0.2% THD		
Sensitivity:	1V RMS (0dBV)		
Power Requirements:	100V AC, 50/60 Hz, 1800W 120V AC, 60 Hz, 1800W 230V AC, 50 Hz, 1800W		
Speaker Complement:	Designed for use with the Sunn 410H or Sunn 215 Bass Loudspeaker Enclosures		
Dimensions:	Height:	3.5"	(8.9 cm)
	Width:	19.0"	(48.3 cm)
	Depth:	15.0"	(38.1 cm)
Weight:	35 lbs		(15.9 kg)

*Product specifications are subject to change without notice*

# CIRCUIT DESCRIPTION

The Sunn 1200S Bass Amplifier employs many new technologies in various sections. This document is a brief overview.

Preamp
The preamp section employs two 12AX7 tubes. Channel one (V1) is fairly conventional, while channel two (V2) uses a second tube with additional op-amp gain (U2B) to provide a 60's style overdrive sound. The op-amp is used as straight gain and is never allowed to become non-linear.
In typical operation, the drive channel and the clean channel are presented to the channel 1/2 mix control (R25) so that a "blend" can be established. The channel select button (S7) on the front panel (or it's foot switch counterpart) selects between this channel mix or channel one only. This selection employs JFETS Q1-Q4.
Signals are then presented to a second-order Sallen and Key filter set to $F_0$ of 36.6 Hz and a Q of 2.1. This filter provides about 6.5dB of boost at 41 Hz.
The signal path is routed to U4B where low-boost (S2) , mid-notch (S4), and high-boost (S3) equalization switches can be used. These circuits are followed by conventional Baxendall low (R67) and high (R70) equalization. The Baxendall circuit output is then sent to a graphic equalizer which can be selected by the footswitch or graphic EQ button (S61) on the front panel. The far-right graphic EQ slider (R660) is a +/- 10dB trim for graphic EQ gain compensation.
Next, the signal is presented to a second-order state-variable filter before being presented to the compressor circuit. Said filter is set to 420 Hz. At the compressor, low-frequency compression ratio (R88) and high-frequency compression ratio (R98) are adjustable to suit the user. Audio is presented to the "compressor EQ balance" (R107). The compressor EQ balance controls the mix ratios of the compressor outputs. A compressor gain trim (R113) is provided to compensate for the amount of amplification lost due to using the compressor. The compressor-gain trim control is able to compensate for a compressed signal of up to 10dB.
The FETs Q5 and Q6 select between pre- and post-compressor via the front panel switch (S8) or footswitch. After passing through op-amp U10B and master-gain control R116, the signal is sent to output jack J3, effects-loop send. The signal input at J4, effects-loop return, goes to differential receiver U11B.

Signals are forwarded to power amp pass through amplifier U12B and on to J5. At these same nodes, the signal is passed on to the 1200 Watt class H power amplifier.

**Power Amplifier**

The power amplifier employs class AB topology in the pre-driver circuit Q8-Q11. Quiescent current is established with transistors Q12-Q13. Driver transistors Q16-Q17 provide drive for Q23-Q26, and Q31-Q34. Transistors Q19,Q21, and Q27-Q30 provide positive “on demand” supply-rail boost. Transistors Q20, Q22, and Q35-Q38 provide the same function for the negative rail.

Transistor Q18 provides “charge depletion” of Q23-Q26 and Q31-Q34. This allows for the suppression of common mode current that can occur at high frequencies.

Relay K1 and associated components reduce output-stage current gain to unity during power-up and over-temperature events as monitored by thermistor RT1 on the main heatsink.

**Power supply**

Primary circuit inrush limiting is accomplished by TH1, a negative temperature coefficient thermistor.

The power supply employs a toroidal power transformer with only one tapped-main secondary. Two large bridge rectifiers are used to obtain +/-47VDC and +/- 94VDC.

High voltage (356VDC) for vacuum tube sections is generated by half-wave multiplier comprised of CR92-CR95, C125-C128.

Low voltage (+/-22VDC) and (+10~ +28VDC variable fan) is supplied by the synchronous rectifier system located on the power supply break-away board. This synchronous system observes the input sine and allows Q81, Q85, and Q88 to be forced on until the input sine wave reaches the correct level as observed by Q83, Q87, and Q90. References Q84 (variably controlled by RT2) CR811 and CR818 are employed. Regulators U21 and U22 reduce the +/-22V lines to +/-16VDC

Heater voltage (24VDC for 2 series-connected 12AX7s in the preamp) is derived from the 32VDC supply (+/- 16VDC).. Excess voltage is dropped across across paralleled ballast resistors, R354-R356, on the preamp PCB.
